My Data Model

I chose to model a collection of music

My main JSON object literal is the artists' category. Each artist is represented by an object that contains their relevant information and a JSON array of objects representing a selection of their albums

```
{
  "artists": {
    "0": {
      "name": "Taylor Swift",
      "genre": "Pop",
      "label": "Republic Records",
      "totalNumOfAlbums": "10",
      "numOfAlbumsInRecord": "3",
      "albums": [
        {
          "title": "Folklore",
          "artist": "Taylor Swift",
          "length": "63:29",
          "year": "2020",
          "numTracks": "17"
        },
        {
          "title": "Evermore",
          "artist": "Taylor Swift",
          "length": "60:38",
          "year": "2020",
          "numTracks": "17"
        },
        {
          "title": "Midnights",
          "artist": "Taylor Swift",
          "length": "69:20",
          "year": "2022",
          "numTracks": "20"
        }
      ]
    },
```
